

Name: GLEAM

Country: Austria

Incorporated: 2013

Fund: Katapult Seed Fund 1

Problem:

Urban delivery with Diesel vans is slow, inefficient and emits high CO₂, NO_x and other emissions. Cities want to regulate the classic delivery van, reduce the speed of all vehicles and get rid of all local emissions. Customers want to get all their online orders delivered within 1-3 hours and logistics companies want an efficient operation with low TCO. A new vehicle category is needed to solve this.

Solution:

GLEAM builds fast electric Cargo Bikes for urban deliveries. Our customers can deliver goods faster and without any local emissions, especially in dense urban areas. With our unique tilting technology, we created the best driving experience for the driver and the cargo. Another unique feature is the spacious loading area which offers different customization options. With a simple switch, you're ready to go to work, transport your goods & tools, go shopping, take the kids to kindergarten, and much more.

Impact:

"GLEAM has already delivered over 300 bikes to customers. With each bike we replace a car or van and therefore reduce 4,0 tons of CO₂ per bike. That means we have already reduced over 1.000 tons of CO₂ from urban traffic with our eBikes and the goal is to reduce 1,0 Gt by 2030."

Mario Eibl,
Founder, GLEAM
