

Name: Zeabuz

Country: Norway

Incorporated: 2019

Fund: Katapult Seed Fund 1

Problem:

Cities are growing while road congestion is already choking mobility flow. 90 % of urban areas are located next to water, that used to be the main infrastructure and is today fundamentally underutilized. Conventional waterborne mobility does not meet the demand of modern society due to high cost structures and low flexibility.

Solution:

Autonomy, combined with battery-electric drive, changes the game completely by reducing cost through crew and energy optimisation. We will launch networks of small vessels that will serve the increasing market with convenience, flexibility and high frequency departures.

Impact:

“To solve the world’s increasing need for mobility and the climate crisis at the same time, we need to utilise urban waterways in a whole new manner. Autonomous ferries makes this possible both from a business and environmental perspective. We are starting a green revolution on water.”

Erik Dyrkoren
CEO, Zeabuz
